

Why Uncodemy Is the Best Choice for

Data Analytics with AI Training & Placement

Because companies hire **DATA SKILLS** — not certificates.
And Uncodemy trains exactly for that.

Data Analytics with AI – **Job-Ready Program**

(Data Analyst / Business Analyst

If your goal is a real Data Analytics job, not just learning tools,
Uncodemy's Data Analytics with AI **Target Batch** is built for you.

Who This Program Is For

- Freshers targeting Data Analyst / Business Analyst roles
- Working professionals planning career transition into Analytics
- Non-IT background students with strong aptitude
- Professionals aiming for salary growth & domain shift

Why 10,988+ Students Trusted Uncodemy

- **10,988+** students trained
- **289+** Batches successfully completed
- Proven placement-oriented training system
- Trainers with real industry & project experience

This is not a recorded course. This is a career-building system.

Why Data Analytics + AI Is a Career-Defining Skill

- Companies are actively hiring professionals who can:
- Analyze large datasets
- Extract business insights
- Build dashboards for decision-making
- Communicate insights to stakeholders

Uncodemy trains exactly what companies ask in interviews.

Proven Legacy & Credibility (Why Trust Uncodemy?)

Before choosing any institute, students ask one question:
“Why should I trust you?”

- **10,988+ students trained**
- **289+ batches** successfully completed
- Multiple Target Batches delivered for Analytics & BI roles
- Strong placement outcomes across domains

This is not a new experiment. This is a tested, proven system.

1. Data Analytics Is in Demand — Uncodemy Trains It the RIGHT Way

Most institutes teach only tools without business context.
Uncodemy focuses on industry + decision-driven analytics:

- Data Analytics with Python + SQL
- Business Analytics & KPIs
- Dashboard-driven insights
- AI-assisted analytics workflows

Result:

Students learn how companies actually use data, not textbook analytics.

2. Industry-Focused & Job-Ready Curriculum (Not Random Topics)

Our curriculum is industry-mapped, not YouTube-inspired.

Starts from data fundamentals

Moves to advanced analytics & AI use-cases

Ideal for:

- Freshers
- Working professionals
- Non-IT background aspirants

You are trained for real business problem solving, not just tool usage.

3. Strong Foundation in Analytics & Statistics (Major Differentiator)

Most candidates fail analytics interviews due to weak fundamentals.

At Uncodemy, we build strong core foundations:

Statistics & probability

Data cleaning & preprocessing

Business metrics & KPIs

Logical & analytical thinking

Result: Confidence in answering:

“How did you derive this insight?”

4. Complete Data Analytics Framework Exposure

You don't just analyze datasets —
you solve business problems like real analysts do:

- Data extraction & transformation
- Exploratory Data Analysis (EDA)
- Dashboard storytelling
- Predictive analytics basics
- Insight presentation & reporting

Students confidently answer:

"What business problem did you solve using data?"

5. Modern Analytics Stack (Highly Demanded in Market)

Unacademy covers exact tools used in real companies:

- Python (Pandas, NumPy, Matplotlib, Seaborn)
- SQL (MySQL / PostgreSQL)
- Power BI / Tableau
- Excel (Advanced)
- AI tools for analytics
- Basics of Machine Learning

Result:

Ready for Data Analyst / Business Analyst / BI roles, not just internships.

6. AI-Powered Analytics (Future-Ready Edge)

Very few institutes teach this

- AI-assisted data analysis
- Predictive analytics fundamentals
- Using ChatGPT & AI tools for analytics workflows
- Automation in reporting & insights

You become future-ready, not just job-ready.

7. Real-Time Live Projects (Multiple Domains)

Our trainers have worked on real industry projects, so students get real exposure.

Live projects from domains like:

- IT & Tech
- Banking & FinTech
- Sales & Marketing Analytics
- Healthcare Analytics
- E-Commerce & Retail

Result:

Students explain real business cases, not dummy datasets.

8. Target Batch System = Placement-Focused Training

Uncodemy does NOT run Analytics as a casual batch.

Limited students per batch

Daily assignments & Modules

Individual progress tracking

Extra mentoring for weak areas

Average students become job-ready analysts, not just course finishers.

9. Parallel Interview & Placement Preparation (From Day 1)

Most institutes talk about placement after course completion.

Uncodemy starts from Day 1:

Resume & LinkedIn optimization

Real interview question discussion

Case-study-based mock interviews

Communication & stakeholder-handling practice

Students stop fearing interviews — and start clearing them.

10. Hiring-Cycle Aligned Training (Right Skill + Right Time)

Uncodemy plans Target Batches based on hiring cycles:

Course completion aligned with recruitment drives

Projects & resume ready before interviews start

Higher selection probability.

11. Salary Growth, ROI & Career Impact

Market Reality:

- Average Data Analyst Salary: ₹6–12 LPA

- Skilled Analytics + AI Professionals: ₹15–35+ LPA

With This Skill Set, You Can Target:

Product companies

Service-based MNCs

FinTech & Startups

Remote / Hybrid analytics roles

High ROI = Worth your money & worth your time

12. Certifications & Documentation Support

Course Completion Certificate

Live Project Certificate

Internship / Project Letter

Advanced certification guidance

Support for future upskilling

Industry-aligned Trainer Profiles specifically for the Data Analytics with AI Training & Placement Program, matching current hiring expectations (Data Analyst AI Engineer roles).

Mr. Irshad Khan

Sr. Trainer
Dept. Of Artificial Intelligence
Uncodemy.
Data Scientist in Deloitte
Ex-Ministry of Health

Data Scientist

Machine Learning

Python

Statistical Modeling

Analytics Researcher

Applied Mathematics Expert

Trainer Highlights

A results-driven Data Scientist with strong expertise in data mining, predictive modeling, and applied analytics, experienced in solving real-world business problems across multiple domains.

Expertise in Tools & Technologies

- Programming: Python
- Data Analysis: Pandas, NumPy
- Statistics & Modeling: Regression, Classification, Clustering
- Machine Learning & Deep Learning: ML & DL algorithms
- Data Mining & Processing: Large-scale datasets
- Simulation & Forecasting Models

Industry-Relevant Strengths

- Builds end-to-end predictive models
- Strong focus on business insight generation
- Trains students on analytics reasoning & model explanation

What Students Gain

- Strong analytics & statistical clarity
- Hands-on predictive modeling experience
- Confidence to explain data-driven decisions in interviews

Mr. Usman Raja

Sr. Trainer

Dept. Of Artificial Intelligence

Uncodemy.

IIT Madras, Ex-KPMG

Working On : Morgan

Data Science

Business Intelligence

Generative AI Expert

Industry Expert with 6+ Years
of Experience

Trainer Highlights

A highly experienced Data Scientist & AI professional with strong expertise in Data Analytics, Business Intelligence, Machine Learning, Deep Learning, and Generative AI. Known for building production-ready AI systems and mentoring students for real industry roles.

Expertise & Real-World Projects

- Data Analytics, Machine Learning & Deep Learning
- Generative AI & Large Language Models (LLMs)
- AI Chatbots using RAG (Retrieval Augmented Gen.
- GAN-based Image Translation Models
- Automated Evaluation Systems for EdTech platforms
- Predictive Analytics & Statistical Modeling
- End-to-End Model Deployment & Monitoring

Skillset & Tools

- Programming: Python, SQL
- Data Science & AI: Machine Learning, Deep Learning, NLP, Generative AI, RAG
- Business Intelligence: Power BI, Tableau, Google Data Studio
- Data Engineering: Data pipelines, model deployment workflows
- AI Systems: Chatbots, AI agents, evaluation frameworks

What Students Gain

- Strong foundation in Data Analytics + AI + BI
- Hands-on experience with Generative AI & LLM projects
- Confidence to explain AI systems & analytics decisions in interviews
- Readiness for roles like:
- Data Analyst
- Business Intelligence Analyst
- Data Scientist
- AI / ML Engineer

Mr. Anshul

Sr. Trainer
Dept. Of Artificial Intelligence
Uncodemy.
Senior Data Scientist
Yum! Brands
Ex-Fortune 500 Experience

Data Science

Machine Learning

Business Intelligence

Generative AI Expert

**Industry Expert with 6+ Years
of Experience**

Trainer Highlights

A highly experienced Senior Data Scientist with over 6+ years of industry exposure, working with global Fortune-500 companies to drive data-based decision-making.

Expertise in Tools & Technologies

- Programming: Python
- Analytics & ML: Advanced ML models
- Business Analytics: Strategic decision analytics
- Visualization & Reporting: Tableau / BI tools
- Industry Domains: Retail, E-commerce, Enterprise Analytics

Industry-Relevant Strengths

- Bridges business + analytics + strategy
- Focus on decision-driven analytics
- Trains students to think like industry data professionals

What Students Gain

- Corporate-grade analytics exposure
- Business problem-solving mindset
- Readiness for mid-to-senior analytics roles

Ms. Rachna

Sr. Trainer

Dept. Of Artificial Intelligence

Uncodemy.

Current: GV Cloud Secure
Ex-Test Yantra | Concentrix

Data Science

Machine Learning

Business Intelligence

Generative AI Expert

Industry Expert with 6+ Years
of Experience

Trainer Highlights

An AI-focused Data Scientist with hands-on experience in healthcare, predictive analytics, and intelligent systems, known for practical, student-friendly teaching.

Expertise in Tools & Technologies

- Programming: Python
- Machine Learning: Regression, Classification, Clustering
- AI Projects:
 - Alexa-like AI Assistants
 - Cancer Prediction Models
 - Virtual Mouse using AI
- Analytics: Feature engineering & model evaluation

Industry-Relevant Strengths

- Focus on AI-powered analytics
- Hands-on training with real predictive use-cases
- Strong mentor for beginners entering AI & analytics

What Students Gain

- AI-driven analytics exposure
- Healthcare & advanced ML project experience
- Strong portfolio-ready projects
