

Year-End Opportunity Program 2025

*"India's IT sector expected to add nearly 40% more jobs in FY 2026-27 translating into approximately **1 million** new IT-related vacancies" - Survey*

Professional Certificate Program in

Business Analytics With AI

*Industrial Training with
Hands-On Learning That Prepares You for the Real World*

Average Package: ₹8–28 LPA | Program Duration: 6–7 Months

Tools Covered

AI Tools

Projects

1. Domain: Retail

Project - Customer Segmentation

Objective: Focuses on grouping customers into distinct segments based on their behavior, preferences, and purchasing patterns. These insights help businesses design personalized marketing campaigns to better meet customer needs and boost engagement.

Approach: Group customers based on purchasing behaviors.

Execution: Analyze customer demographics and purchase history. Use K Means to form clusters. Visualize results in Tableau.

Programming & Tools:

Python (K-Means Clustering), Tableau.

2. Domain: E-Commerce

Project - Pricing Strategy Optimization

Objective: Analyze pricing strategies to maximize revenue.

Approach: Use historical pricing and sales data to find optimal prices.

Execution: Analyze price elasticity of products. Build a demand curve model. Visualize results and recommendations.

Approach: Use historical pricing and sales data to find optimal prices.

Execution: Analyze price elasticity of products. Build a demand curve model. Visualize results and recommendations.

Programming & Tools:

Python (Pandas, Numpy), Tableau.

3. Domain: Human Resources

Project - Employee Performance Analysis

Objective: Analyzing employee performance data to identify top performers, areas of improvement, and training needs. By using metrics like productivity, efficiency, and feedback scores, the analysis supports fair appraisals and helps design targeted development programs to enhance overall workforce performance.

Approach: Evaluate KPIs and identify areas of improvement. Share them with stakeholders also create an automation to track time to time improvement in performance.

Execution: Import performance data into Excel. Calculate KPIs and identify top/bottom performers. Visualize trends in Tableau.

Programming & Tools:

Excel, Tableau/Power BI.

Projects

4. Domain: Advertising

Project - Marketing Campaign Analysis

Objective: Evaluate the success of marketing campaigns.

Approach: Measure ROI and customer engagement.

Execution: Extract data on campaign performance. Use SQL to analyze key metrics like CTR and conversion rate. Visualize campaign results in Tableau.

Programming & Tools:

Excel, Tableau, SQL.

5. Domain: Customer Service

Project - Streamlining Customer Support

Objective: Improve operational efficiency in customer support by analyzing existing workflows, identifying bottlenecks, and recommending tools and processes to enhance response times & customer satisfaction.

Approach: Map the current customer support workflow. Identify bottlenecks such as manual tasks causing delays. Analyze customer satisfaction data to pinpoint improvement areas. Design a new workflow incorporating tools like chatbots and e-ticketing systems. Recommend KPIs to track and measure performance improvements.

Execution: Use BPMN tools to map the current customer support process, focusing on identifying manual steps, delays, and inefficiencies. Collect data on key metrics like response times, resolution times, and customer satisfaction scores, organizing it in Excel for analysis. Highlight bottlenecks such as manual ticket assignments that cause delays or errors.

Programming & Tools: Process Mapping (BPMN), Excel, JIRA.

6. Domain: E-Commerce

Project - Inventory Management

Objective: Optimize inventory levels by analyzing sales trends and demand patterns. The goal is to minimize costs while ensuring the right products are always available to meet customer needs.

Approach: We analyze inventory turnover rates to understand how quickly products are sold and restocked. Additionally, we determine optimal reorder levels to ensure stock availability minimizing storage costs.

Execution: Analyze historical inventory data. Calculate optimal reorder points using Python. Summarize findings in Excel reports.

Programming & Tools: Python, Excel, Power BI

Palaced Students Review

Student Review — Tanveer Hasan (Placed at J.P. Morgan | 21 LPA)

"Joining Uncodemy* was one of the best decisions of my career journey. The institute provides top-notch, practical training that bridges the gap between academic knowledge and real-world industry skills. The mentors are extremely skilled and always ready to help — they guide you through every concept with patience and real examples.

The career support system at Uncodemy is remarkable. From resume enhancement and mock interviews to continuous motivation and feedback, everything is designed to make you placement-ready.

Student Review — Sweety (Placed at Infosys | 18 LPA)

"My experience at Uncodemy has been truly life-changing. The training approach here is comprehensive, practical, and industry-driven, which helped me build a strong foundation in both technical and professional skills. The mentors are highly experienced and always go the extra mile to ensure every student understands concepts clearly and gains real-time project exposure.

What makes Uncodemy stand out is the continuous placement guidance — from mock interviews and communication sessions to one-on-one mentorship, every step is focused on helping students achieve their career goals.

Student Review — Farhan Noman (Placed at Cubastion | 9.5 LPA)

"Uncodemy completely changed the direction of my career. The training here is incredibly practical and project-driven, giving real industry experience rather than just theory. The mentors are highly supportive, explaining every topic clearly and guiding us through real-world scenarios, mock interviews, and placement preparation.

I joined with limited experience, but within a short time, I gained the confidence and skills needed to succeed in interviews and perform in the IT industry.

Student Review — Shahil Growar (Placed at Midland Credit Management | 7.5 LPA)

"Uncodemy completely changed the direction of my career. The training here is incredibly practical and project-driven, giving real industry experience rather than just theory. The mentors are highly supportive, explaining every topic clearly and guiding us through real-world scenarios, mock interviews, and placement preparation.

I joined with limited experience, but within a short time, I gained the confidence and skills needed to succeed in interviews and perform in the IT industry.

Placed Students Review

Student Review — Shweta Nigam (Placed at FIS | 6.8 LPA)

"Joining Uncodemy was one of the best decisions of my career journey. The mentors provided constant support, hands-on project exposure, and deep insights into real-time business analysis. Their placement team guided me through every step — from resume building to interview preparation — which helped me land my dream role as a Business Analyst at FIS."

"Grateful to Uncodemy for helping me grow and achieve this milestone!"

Student Review — Rupali Ojha (Placed at HSBC | 5.5 LPA)

"Uncodemy gave me the perfect platform to start my IT career. The trainers are highly skilled and make learning interactive and practical. The hands-on projects and continuous placement support helped me gain confidence and prepare for real interviews. I'm grateful to Uncodemy for guiding me throughout my journey and helping me get placed as a Business Analyst at HSBC."

Student Review — Fatima (Placed at ACESS Meditech | 4.8 LPA)

"My journey with Uncodemy has been truly rewarding. The trainers made every concept easy to understand with real-time projects and practical sessions. The constant motivation and personalized placement guidance helped me gain confidence and secure a role as Business Analyst at ACESS Meditech."

"Thank you, Uncodemy, for shaping my career and helping me achieve my goals!"

Student Review — Neeva Shah (Placed at makeO | 4.5 LPA)

"My journey with Uncodemy has been a great learning experience. The trainers are very supportive and ensure that every concept is understood through real-time examples and projects. The placement guidance and mock interview sessions helped me gain the confidence to face interviews successfully."

"I'm thankful to Uncodemy for their constant support and mentorship that helped me get placed as a Business Analyst at makeO."

Looking back, the decision to take the **API Testing** course at Uncodemy was a turning point in my career. I had some manual testing experience but wanted to switch into automation, especially **API testing**. This course gave me the knowledge and practical exposure I was missing. From understanding how **APIs** work to writing test cases and using tools like Postman and Swagger, everything was covered in depth. Now, I feel confident handling automation tasks in my job.

Before joining Uncodemy, I was struggling to get a job because I lacked technical skills in **API testing**. This course changed that. The training was clear, structured, and full of practical use cases. What really helped me was the way the concepts were explained—step by step, with examples. It gave me the confidence I needed, and today, I'm finally working in the IT industry. I'm so thankful for this opportunity and for the people who helped me reach this point.

I'm from Delhi and joined the **API Testing** course at Uncodemy online. I was worried about how well I'd understand through online classes, but the trainers made it very easy. The course had everything from basics to real project-based training. Now I understand how **APIs** work and how to test them properly. Thank you, Uncodemy!

I wanted to learn **API testing** to enhance my testing profile, but I didn't want another boring theory-heavy course. Luckily, Uncodemy delivered exactly what I needed. The sessions were practical, the tools were taught clearly, and every doubt I had was addressed in detail. Even though it was an online course, it felt like a proper classroom. After completing the training, I got support with resume building and interview prep too. I would definitely recommend this course to anyone looking to grow in the testing field.

While living in Pune, I wanted to learn **API testing** without going to any institute physically. I found Uncodemy's online course, and it turned out to be the right choice. The trainer covered all important tools and gave proper attention to every student. I liked the way the sessions were interactive and practical. After completing the course, I started applying for jobs confidently. Bade harami ho bete
